Average length of stay	12.1 days	13.4 days
Discharge to community **	85.7%	79.4%
Admit to discharge FIM* change	26.3	30.1

Outcomes obtained from United Data System for Medical Rehab. FIM is the functional independence measure used by clinicians to follow the patients functional status. It determines the burden of care.

As the patient progresses the FIM score gets higher demonstrating that the patient is functioning more independently

Community setting is defined as discharging to their own home, board and care, retirement or assisted living.
