Average age	67	64
Average length of stay	12	11
Discharge to community **	91.0%	80.0%
Admit to discharge FIM* change	32.3	30.7

Outcomes obtained from United Data System for Medical Rehabilitation ®. * FIM™ is the functional independence measure used by clinicians to follow the patients functional status. It determines the burden of care.

As the patient progresses the FIM score gets higher demonstrating that the patient is functioning more independently

**Community setting is defined as discharging to home, board and care, retirement or assisted living.
